clariba

360º Business Intelligence Assessment
Full scale insight for your BI investment

Are your users getting the most out of your BI implementation? Do you have the feeling that your BI system is not giving you the expected return on investment (ROI)? Or maybe your BI implementation is not able to handle user requests on time?

Let Clariba help you solve these challenges by evaluating the health of your BI environment.

360º
BI Assessment

Full-Scale Insight for your BI Investment

The health of your Business Intelligence system is influenced by several factors, including your platform architecture, data warehouse/data mart design, content (i.e. universes, reports, dashboards), security, BI toolset and your current licensing model.

Our **360° Business Intelligence Assessment** is based on best practices and an in-depth understanding of your entire BI environment. If your current system has any gaps or challenges, Clariba will recommend steps for making it more secure, stable or efficient for all your users and audiences.

360°
BI Assessment

What is a 360° BI Assessment?

Technical Check up

Clariba will complete a thorough infrastructure audit to determine the reliability, performance and security of your BI platform.

Functional Review

A review of your data model and BI content will establish if information is reliable and current reports are covering all your audience requirements.

Business Discovery

Business Discovery involves understanding your information needs and discovering any functional gaps that could be filled by more suitable tools.
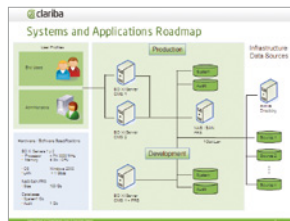

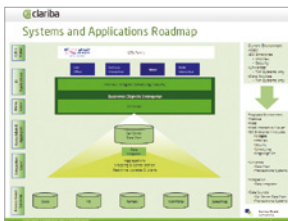

Licensing Optimization

Find out if you are currently optimizing your license investment and if there are any better licensing models for your needs.

360° BI Assessment Results

At the end of your 360° BI Assessment you will receive a comprehensive report covering the results and detected challenges from all four phases, as well as proposed enhancements, ROI opportunities and next steps.
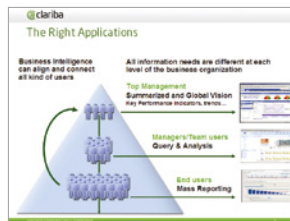

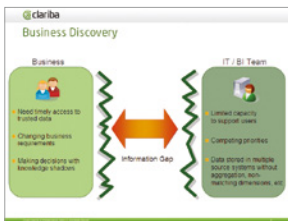

Our 360º BI Assessment Methodology & Process

Throughout each phase of your 360º BI Assessment, our certified BI consultants will work with you to answer the following key questions about your system:

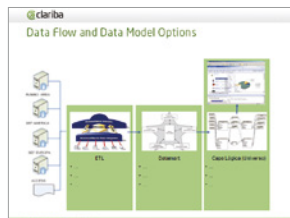

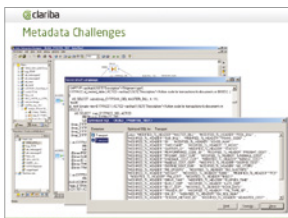

Technical Check up

- Is your BI platform reliable?
- Are your server/s properly sized?
- Are you using the correct environments?
- Is it integrated with your security standards?
- Which areas are causing the most tickets?

Business Discovery

- Are you covering all information needs?
- Are your users using the right tools?
- Can custom development (SDK) fulfill any gaps?
- Are there new tools on the market that are more suitable for your organization?

Functional Review

- Is your data model optimized?
- Is the information reliable?
- Is your metadata well organized?
- Are your reports covering all your needs?
- Is the BI security properly implemented?

Licensing Optimization

- Are you making the most of your license investment?
- Are there any other models worth considering?
- Which modules could do the job better and more cost-effectively?

360º BI Assessment Results

- Audit results and detected challenges
- Proposed enhancements and roadmap
- Opportunities to reduce costs and improve ROI
- Project plan and next steps

360° BI Assessment Deliverables

The final output will be a document covering:

Current situation

- Architecture and Integration
- Content and Security
- Detected issues and challenges

Target scenario

- Proposed architecture
- Proposed functional enhancements
    – Data model
    – BI tools / Custom developments (if required)
    – Licensing proposal

Next steps summary

360° BI Assessment Time Plan Example*

* The exact planning will depend on the contents of the 360° BI Assessment – to be defined.
